PRESENTS

Five Tips To Improving Math Skills

Tip #1 – Enjoy Math Outside the classroom

You can learn to enjoy Math if you see it as just a part of everyday activities, like with shopping, cooking, or counting how many steps it takes from your couch to the refrigerator!

Tip # 2 – Connect with others through Math

Look at Math as an opportunity to connect with others all over the world. Just imagine, people around the world speak different languages, but yet when understanding Math concepts our connected understanding of the concepts in Math can unite us all!

Tip #3 – Find Math Support

Just as with other matters in life, we could all use a little help when we are not sure as to how to solve Math problems. Finding support networks (like EduKitchen) can make the pressures of learning easier when you work with others, whether it be in the classroom or online.

Tip #4 – See Math as a Language

All languages have vocabulary that is unique to understanding what needs to be said. The same is true for Mathematics. If you start to get in the habit of using Math vocabulary as you are explaining your answers whether through spoken or written language, then you will find it very easy to communicate with anyone willing to listen!

Tip #5 – Share Ideas in Math

Being able to share your ideas and knowledge about Math, is just as important as understanding the concepts in the first place. Be that help someone is looking for, it will make you feel better about being able to help others in need, and build your confidence in better understanding the subject, so that everyone wins!
